## Instalación de las planchas

Las planchas se entregan con film de polipropileno adherido en ambas caras para protección. La cara que tiene el film con las impresiones es la que contiene la protección ultravioleta y debe ser removida inmediatamente después que se termina la instalación.

Efectúe los cortes con una sierra eléctrica ó con un cuchillo de mano, NO remueva los films de protección durante el proceso de corte.

Instale las planchas con las celdas de inclinación para permitir la caída del agua.

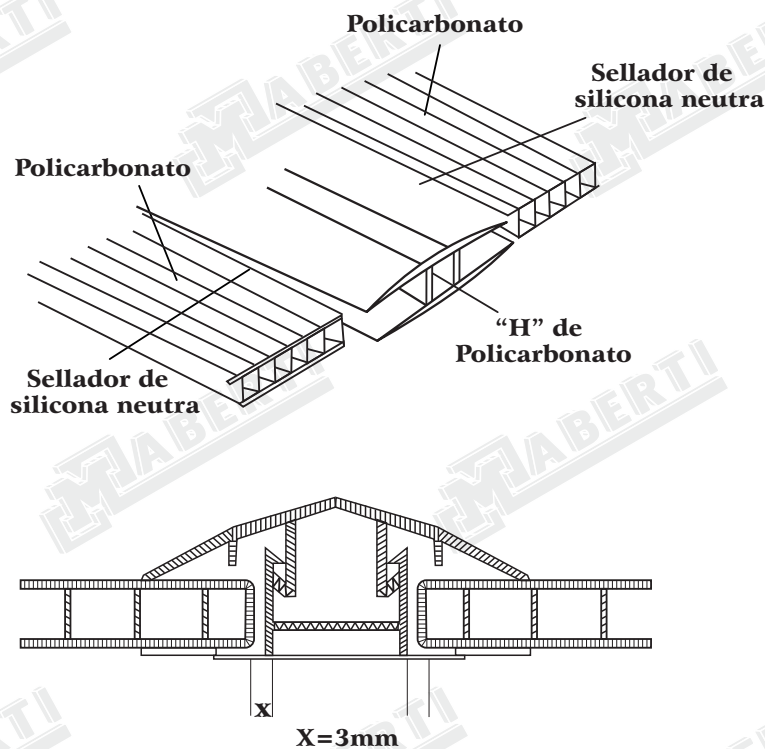

Instale las planchas con la cara protegida contra rayos UV (lado cubierto por protector señalizado) hacia el sol.

Advertencia: Si están instaladas de forma incorrecta no se aplica la garantía y pueden sufrir decoloración.

Los agujeros para colocar los tornillos en la plancha deben ser perforados con 2mm más de diámetro para permitir la expansión. Se recomienda utilizar huacha plana.

Las celdas expuestas deben ser cubiertas por la cinta permeable y conector terminal "U" para evitar el ingreso de agua y polvo.

Las uniones de las planchas se realizan con el perfil base/tapa ó el perfil "H" fijándose a la estructura con tornillos.

## Almacenamiento y mantenimiento

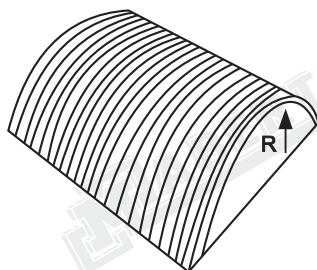

Almacénelas alejadas de los rayos solares y en un lugar con buena ventilación.

Para la limpieza, utilice agua y jabón. Evite abrasivos que puedan rayar la superficie.

La contaminación causada por soluciones químicas, debe de ser limpiada con alcohol y un paño suave, caso contrario pueden causar manchas o rupturas.

El polvo y suciedad deben ser limpiados con un paño y detergente neutro y secados con un paño limpio de algodón u otro material suave.

El suelo húmedo, ácido o alcalino puede causar daños.

Espesor mm	Radio mínimo mm
4	700
6	1050
8	1400
10	1750

## Especificaciones del producto alveolar

Color	Propiedades
